

Plan the bed. Walk the farm.

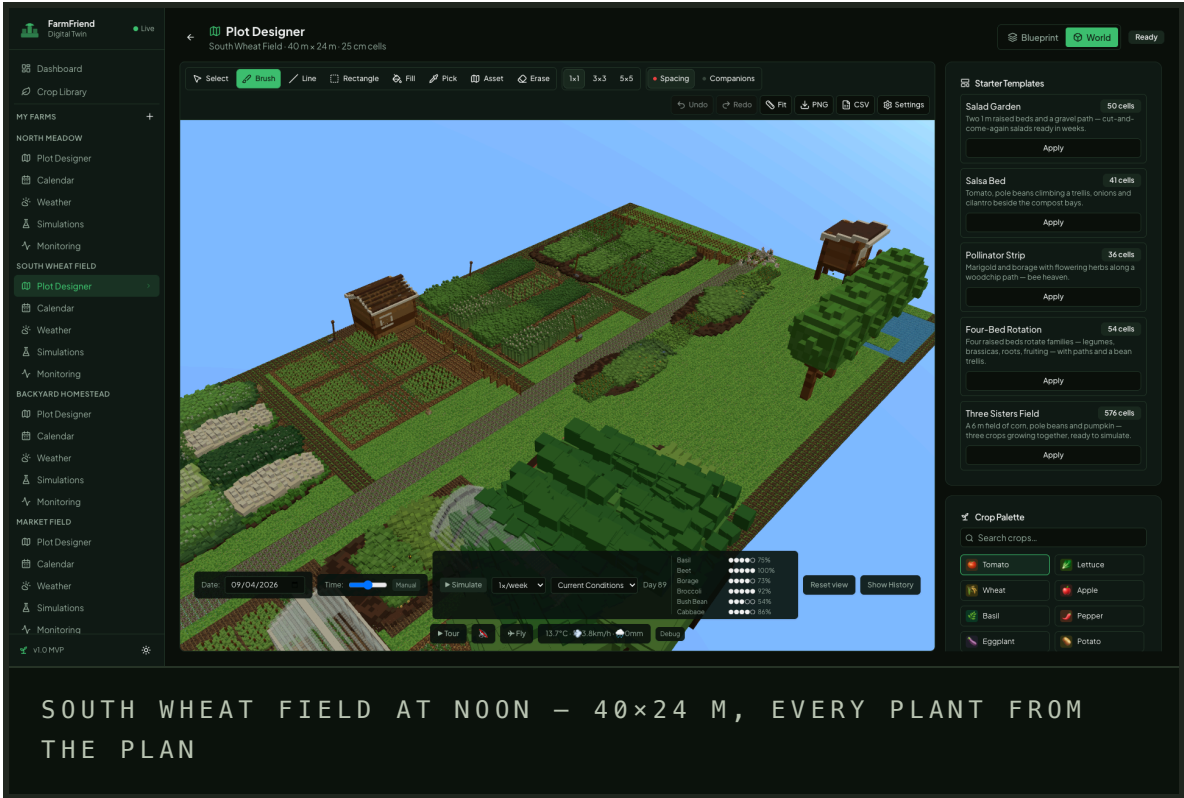

A voxel digital twin for real gardens and small farms. Blueprint at 25 cm, walk it in 3D, rehearse the season, then plant the real thing.

BLUEPRINT 2D

WORLD 3D

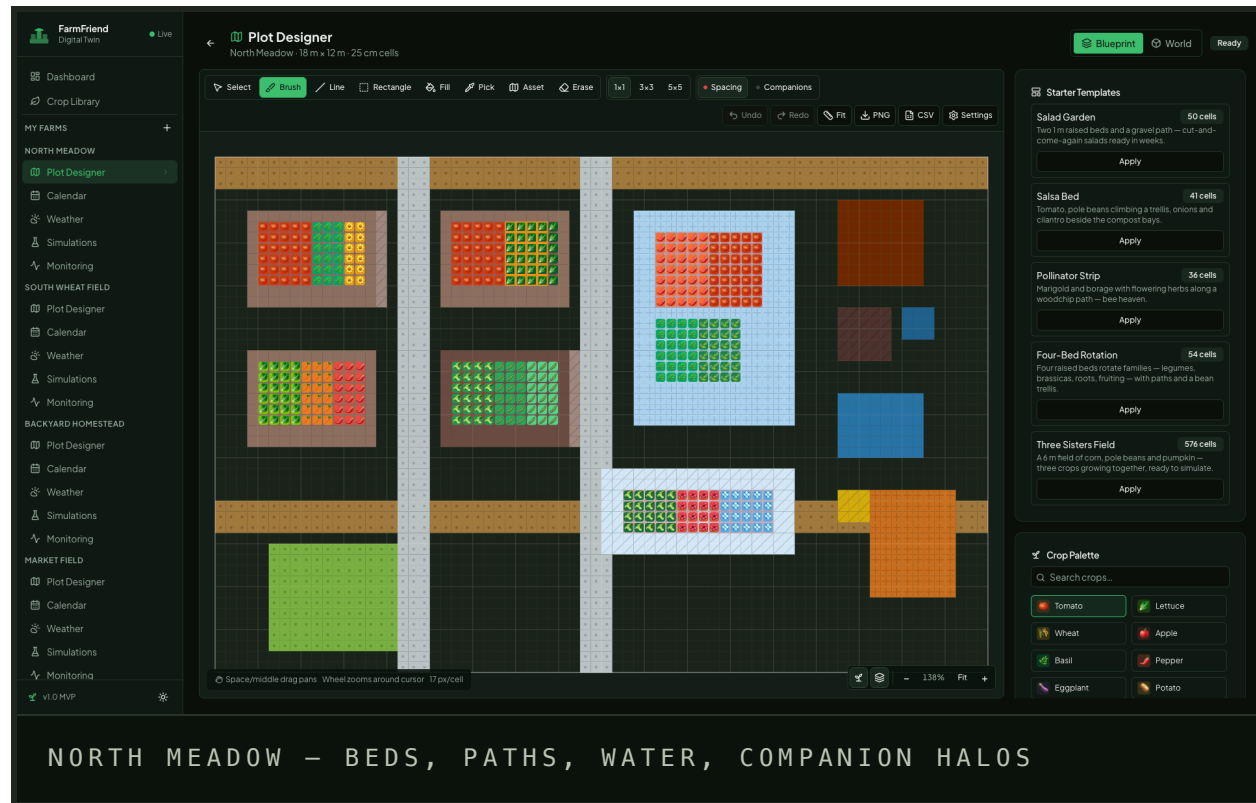

SIMULATIONS

LOCAL-FIRST

The blueprint is the truth

PLATE 01 · BLUEPRINT 2D

► 25 CM CELLS — SPACING IS REAL BEFORE YOU DIG

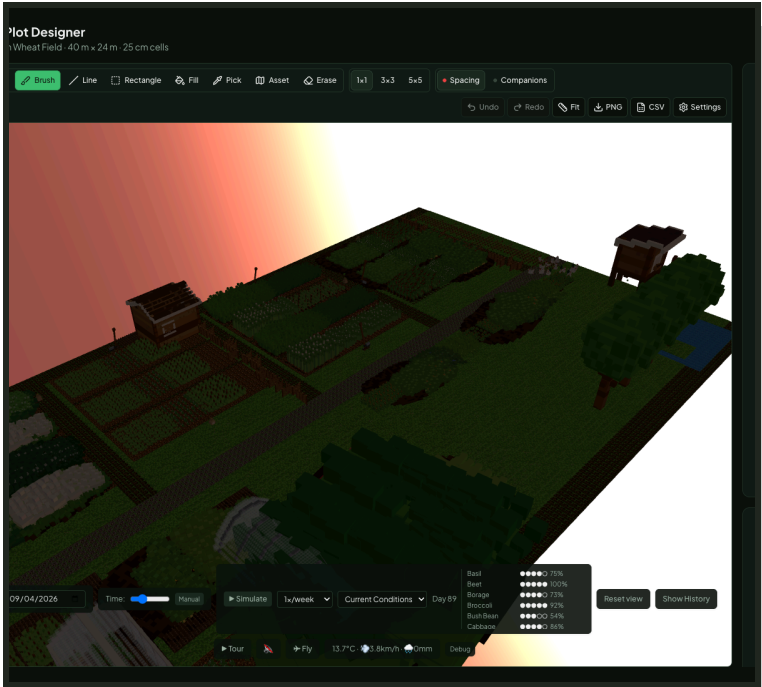

► PLANT COUNTS, YIELD EST., WATER DEMAND LIVE

► SPACING VIOLATIONS + COMPANION OVERLAYS

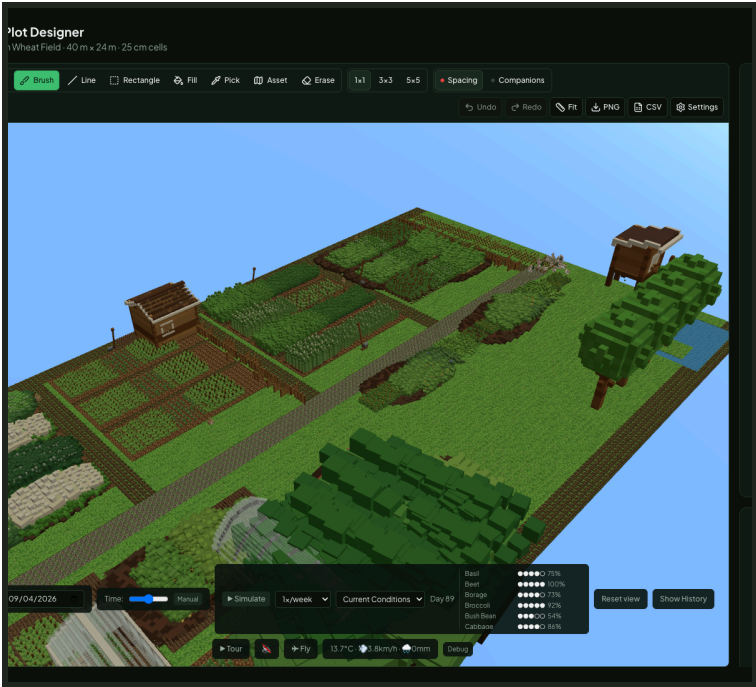

► TEMPLATES: SALAD GARDEN · SALSA BED · FOUR-BED ROTATION

► PNG EXPORT + SHOPPING-LIST CSV

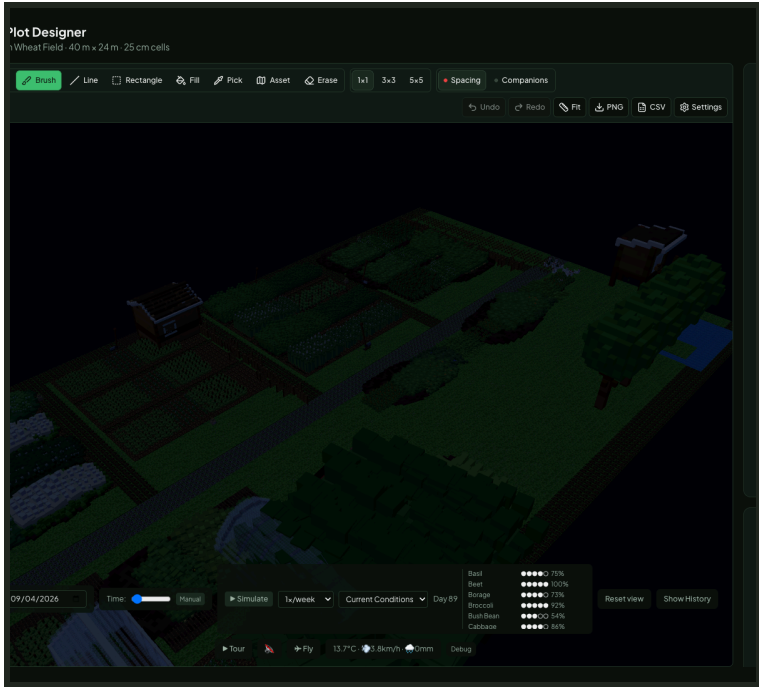

Then the plan stands up

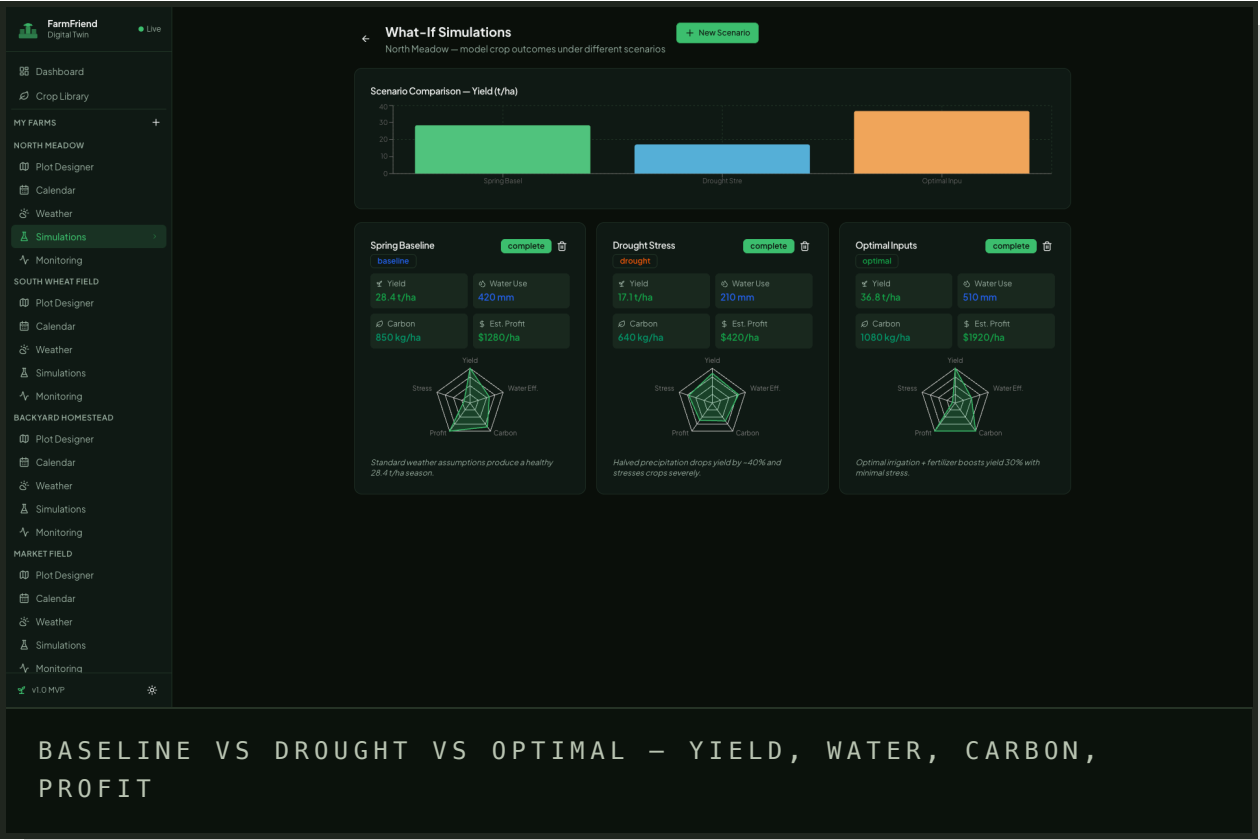

DAWN 05:58 – WARM AND LOW.

NOON – FULL SUN, LIVE GROWTH PANEL.

NIGHT – MOONLIGHT; THE DAY ACTUALLY ENDS.

- PRESETS: DROUGHT · HEAT · OPTIMAL · CLIMATE +2°C
- 28.4 → 17.1 T/HA WHEN THE RAIN HALVES
- OPTIMAL INPUTS: +30% YIELD, LOW STRESS
- TRANSPARENT LOCAL MODEL — OFFLINE & EXPLAINABLE

Ground truth, live

HONEST NOTES

Simulations are transparent what-if illustrations, not an agronomic oracle. Frost dates are climate normals, always overridable. The twin is a planning twin, not a satellite photo — and that's the point.

Spread it

X / TWITTER

I can draw my garden bed in 2D, flip a switch, and walk through it in 3D — then simulate a drought year before planting a single seed.

FarmFriend. Free, open source, runs in your browser.

Plan the bed. Walk the farm. 🌱

LINKEDIN

Most garden planning is a spreadsheet with extra steps. FarmFriend is a digital twin instead: a 25-cm blueprint that stands up into a 3D voxel farm — then lets you rehearse the season before you commit a single seed.

Local-first. Offline-friendly. MIT.

TIKTOK / REELS HOOK

POV: you plan your whole farm in a video game that's secretly real 🌱 draw the beds → watch them stand up in 3D → run a drought year → print the shopping list → plant the real thing.

THE LINE TO REMEMBER

“Plan the bed. Walk the farm.”
